

**Conducting an Industrial Hygiene (IH) Worksite Survey Process:** The process through which an IH Technician conducts a worksite survey for an existing location

**Point of Contact**

**Division:** Office of the Chief Surgeon (ARNG-CSG)

**Description**

The IH technician is required to conduct a worksite survey periodically to ensure that the facility is up to current standards and functioning correctly. After identifying that a worksite needs to be evaluated, the IH technician works with the Regional IH Program Manager to research the survey history of the location and uses this information to develop a Worksite Survey Strategy. This document details the necessary samples that must be collected at the given location. After completing the survey, the IH technician analyzes the samples and compiles a final IH worksite evaluation report providing a detailed explanation of the findings.
